

Trace Element Monitoring Programme

Production Profile Plus (PP+) is an annual monitoring of trace elements to identify problems before they affect cow condition and performance. You can also talk to our vets about a Production Profile Plus programme for your dry-stock.

Our experienced vets will provide you with tailored advice based on your lab results. You will also receive a written report with an explanation of lab results and a guide to supplementation with recommended dose rates of various products. Extras can be included in the blood profiling for the price of the lab fees only. This scheme can also be customised to meet your needs, so talk to us today.

The Production Profile Plus scheme includes:

3 visits at crucial times of the year:

Precalving - 8 liver samples tested for Copper, 6 blood samples tested for Selenium, 8 blood samples tested for Magnesium

Pre-mating - 6 blood samples tested for Selenium, 8 blood samples tested for Magnesium

Pre-dry off - 4 liver samples tested for Copper, 6 blood samples tested for Selenium, 8 blood samples tested for Magnesium

Additional tests can be added

eg. B12 to determine cobalt requirement and BHOB to determine energy balance.

One annual fee gives you:

- 3 vet visits with 8 bloods and 4 liver biopsies each time.
- Discounted lab fees.
- Expert advice.
- 3 written reports.
- Mileage.
